

Submission of final app & repo, (week 20). This assessment is eligible for 10 additional working days extension without penalty, but you need to apply for the extension. The cut-off date is 9th April at 4 pm

Run your web application with 'forever' and submit two URLs as well as a copy of your main.js file.

Submit the URL for your app and the URL of your repo in the submission link that will be provided for you on VLE.

Your app should be running on:

http://doc.gold.ac.uk/usr/YOUR_VIRTUAL_SERVER_ID

You should give master (developer) access to your repo to the following GitLab accounts: ehoma001 and TAs
Refer to lecture notes for more information on final submission and also check this page before submission not missing any updates on this page
Your app should be at the top level of your virtual server in "myapp" subdirectory and also at the top level of your repo

*More info about submission can be found on Final App and Repo assessment section here: <https://learn.gold.ac.uk/course/view.php?id=18385#section-14>

*Make sure you check this link for final updates before submitting

Submission status

Submission status	Submitted for grading						
Grading status	Released						
Due date	Friday, 26 March 2021, 4:00 PM						
Time remaining	Assignment was submitted 4 days 4 hours early						
Grading criteria	Rubric for final and repo assessment						
	Calorie Buddy dynamic web application						
	<table><tr><td>1) Is the URL of the app submitted and working? 2) Is the URL of gitlab repo submitted and working? 3) Can you see README file in Gitlab repo or is it submitted separately? 4. Is main.js submitted? 5. Is it a Node.js app? (R12) other programming languages are not acceptable.</td><td>If the answer to any of the 5 questions is 'No', leave a feedback and mark the student ZERO and do not check the rest of the rubric. <i>0 points</i></td><td>Yes, all submitted and working. Continue with the rest of the marking. <i>0 points</i></td></tr><tr><td>main.js and plagiarism</td><td>low similarity score <i>0 points</i></td><td>I am flagging this assignment for further investigation, please continue with the marking. <i>0 points</i></td></tr></table>		1) Is the URL of the app submitted and working? 2) Is the URL of gitlab repo submitted and working? 3) Can you see README file in Gitlab repo or is it submitted separately? 4. Is main.js submitted? 5. Is it a Node.js app? (R12) other programming languages are not acceptable.	If the answer to any of the 5 questions is 'No', leave a feedback and mark the student ZERO and do not check the rest of the rubric. <i>0 points</i>	Yes, all submitted and working. Continue with the rest of the marking. <i>0 points</i>	main.js and plagiarism	low similarity score <i>0 points</i>

Is main.js submitted? 5. Is it a Node.js app? (R12) other programming languages are not acceptable.	If the answer to any of the 5 questions is 'No', leave a feedback and mark the student ZERO and do not check the rest of the rubric. <i>0 points</i>	Yes, all submitted and working. Continue with the rest of the marking. <i>0 points</i>					
main.js and plagiarism	low similarity score <i>0 points</i>	I am flagging this assignment for further investigation, please continue with the marking. <i>0 points</i>					

R1: Home page	none <i>0 points</i>	to some extent, a number of links are included but not all <i>1 points</i>		completely done, I can navigate to and from all pages without changing URLs <i>3 points</i>	more than what expected, improved layout or other improvements <i>3.5 points</i>
R2: About page	none <i>0 points</i>		simple about page with no improvement compared to labs <i>1 points</i>		more than what expected, improved layout or other improvements <i>1.5 points</i>
R3: Register page To check R3C refer to the code (main.js), search for 'bcrypt' and see if hashed password is saved in '/registered' route in the database	none <i>0 points</i>	R3A only: register form is implemented only. <i>2 points</i>	R3A,B,C: partly implemented. <i>3 points</i>	R3A,B and C are completely implemented and working well <i>4 points</i>	more than what expected, improved layout or other improvements <i>4.5 points</i>
R4 Login: test with the username you registered in R3	none <i>0 points</i>	R4A only <i>1 points</i>	R3A,B,C: partly implemented. <i>2 points</i>	R4A, B and C are completely implemented and working well <i>4 points</i>	more than what expected, improved layout or other improvements <i>4.5 points</i>
R5 Logout	none <i>0 points</i>		done but simple logout page with no improvement compared to labs <i>1 points</i>		more than what expected, nice farewell message to the user logging out or other improvements <i>1.5 points</i>
R6 Add food page check list page, can you see recently added food in the list page?	none <i>0 points</i>	R6A only, add form only implemented <i>1 points</i>	R6A,B,C: partly implemented. <i>2 points</i>	R6A, B and C are completely implemented and working well. <i>4 points</i>	more than what expected, improved layout or other improvements <i>4.5 points</i>
R9 List page	none <i>0 points</i>	R9A only, simple list page similar to labs <i>2 points</i>		R9B- tabular list page <i>4 points</i>	more than what expected, improved layout or other improvements <i>4.5 points</i>
R9C, going beyond-check box next to each food and doing calculations	not implemented <i>0 points</i>	checkbox is added but is not working <i>2 points</i>	check box is added and is working but with errors <i>4 points</i>	check box is added and is working with no error and calculations are done and displayed correctly <i>6 points</i>	more than what expected, done in a nice creative way <i>6.5 points</i>
R7 search page	none <i>0 points</i>	R7A only, search form only <i>1 points</i>	R7A and B, basic search <i>2 points</i>	R7A, B and C completely done, both basic and advanced search are implemented and are working <i>8 points</i>	more than what expected, done in a nice creative way <i>8.5 points</i>

R8 Update food page, test with the food item you added in R6, check list page again, can you see recently updated food in the list page?Mark R8 again if necessary	none <i>0 points</i>	R8A only, update form only <i>1 points</i>	R8 A and B form displayed and update operation attempted, but some missing functionalities <i>2 points</i>	R8A, B are implemented and working well. For going beyond section of R8B refer to the next criterion <i>4 points</i>	more than what expected, update is done through search or via a list <i>4.5 points</i>
R8C Delete food page, test with the food item you added in R6, check the list page, heck list page, can you see recently deleted food in the list page? mark R8C again if necessary	none <i>0 points</i>	delete form only <i>1 points</i>	form displayed and delete operation attempted, but some missing functionalities such as confirmation message <i>2 points</i>	completely done, including the delete confirmation message. For going beyond section of R8C refer to the next criterion. <i>4 points</i>	more than what expected, delete is done by search or via a list <i>4.5 points</i>
Going beyond R8B and R8C, update and delete operations on a food item are only available to the user who added that food not all logged-in users	none <i>0 points</i>	one of the update or delete operation is only available to the user who added the same food item <i>3 points</i>	both update, delete operations are only available to the user who added the same food item <i>6 points</i>	more than what expected, done in a nice creative way <i>6.5 points</i>	
R10 API	none <i>0 points</i>	to some extent <i>2 points</i>	completely done <i>3 points</i>	API that implements get, post, push and delete check readme file for this to see if implemented <i>9 points</i>	
R11 form-validation,	none <i>0 points</i>	to some extent, just a few validations, such as checking email address or length of password or username <i>2 points</i>	form validation is implemented in many cases <i>5 points</i>	all form data has some sort of validation <i>10 points</i>	
Access control add, update and delete food pages are available only to logged-in users	none <i>0 points</i>	one of the three access controls are implemented <i>2 points</i>	2 out of three implemented <i>4 points</i>	all three implemented <i>6 points</i>	
(Repo) readme file referring to students' work, can you see requirement list and file name and line number in front of each requirement	none <i>0 points</i>	list of requirement only no file name or line number <i>1 points</i>	list of requirement and file names only <i>2 points</i>	completely done, list of requirements, file name and line number each one is addressed. <i>5 points</i>	

(Repo) Readme file includes data model: ER digram or database details)	none <i>0 points</i>	to some extent, collection names or tables names only <i>1 points</i>	collection/table names and field names only <i>3 points</i>	Complete data model including collection/table names, field name and types in each table/collection and ERD in case of SQL back-end <i>8 points</i>
(Repo) good commenting	none <i>0 points</i>	very few comments <i>1 points</i>	comments are added but not with much details <i>3 points</i>	Extensive comments in all submitted files. <i>7 points</i>

Feedback

Grade

Rubric for final and repo assessment

Calorie Buddy dynamic web application

1) Is the URL of the app submitted and working? 2) Is the URL of gitlab repo submitted and working? 3) Can you see README file in Gitlab repo or is it submitted separately? 4. Is main.js submitted? 5. Is it a Node.js app? (R12) other programming languages are not acceptable.

If the answer to any of the 5 questions is 'No', leave a feedback and mark the student ZERO and do not check the rest of the rubric.

0 points

Yes, all submitted and working. Continue with the rest of the marking.

0 points

main.js and plagiarism	low similarity score 0 points		I am flagging this assignment for further investigation, please continue with the marking. 0 points			
R1: Home page	none 0 points	to some extent, a number of links are included but not all 1 points	completely done, I can navigate to and from all pages without changing URLs 3 points	more than what expected, improved layout or other improvements 3.5 points		
R2: About page	none 0 points		simple about page with no improvement compared to labs 1 points	more than what expected, improved layout or other improvements 1.5 points		
R3: Register page To check R3C refer to the code (main.js), search for 'bcrypt' and see if hashed password is saved in '/registered' route in the database	none 0 points	R3A only: register form is implemented only. 2 points	R3A,B,C: partly implemented. 3 points	R3A,B and C are completely implemented and working well 4 points	more than what expected, improved layout or other improvements 4.5 points	
R4 Login: test with the username you registered in R3	none 0 points	R4A only 1 points	R3A,B,C: partly implemented. 2 points	R4A, B and C are completely implemented and working well 4 points	more than what expected, improved layout or other improvements 4.5 points	
R5 Logout	none 0 points		done but simple logout page with no improvement compared to labs 1 points	more than what expected, nice farewell message to the user logging out or other improvements 1.5 points		
R6 Add food page check list page, can you see recently added food in the list page?	none 0 points	R6A only, add form only implemented 1 points	R6A,B,C: partly implemented. 2 points	R6A, B and C are completely implemented and working well. 4 points	more than what expected, improved layout or other improvements 4.5 points	
R9 List page	none 0 points		R9A only, simple list page similar to labs 2 points	R9B- tabular list page 4 points	more than what expected, improved layout or other improvements 4.5 points	

R9C, going beyond-check box next to each food and doing calculations	not implemented 0 points	checkbox is added but is not working 2 points	check box is added and is working but with errors 4 points	check box is added and is working with no error and calculations are done and displayed correctly 6 points	more than what expected, done in a nice creative way 6.5 points	
R7 search page	none 0 points	R7A only, search form only 1 points	R7A and B, basic search 2 points	R7A, B and C completely done, both basic and advanced search are implemented and are working 8 points	more than what expected, done in a nice creative way 8.5 points	
R8 Update food page, test with the food item you added in R6, check list page again, can you see recently updated food in the list page?Mark R8 again if necessary	none 0 points	R8A only, update form only 1 points	R8 A and B form displayed and update operation attempted, but some missing functionalities 2 points	R8A, B are implemented and working well. For going beyond section of R8B refer to the next criterion 4 points	more than what expected, update is done through search or via a list 4.5 points	I couldn't update a food without having to change it's name
R8C Delete food page, test with the food item you added in R6, check the list page, heck list page, can you see recently deleted food in the list page? mark R8C again if necessary	none 0 points	delete form only 1 points	form displayed and delete operation attempted, but some missing functionalities such as confirmation message 2 points	completely done, including the delete confirmation message. For going beyond section of R8C refer to the next criterion. 4 points	more than what expected, delete is done by search or via a list 4.5 points	
Going beyond R8B and R8C, update and delete operations on a food item are only available to the user who added that food not all logged-in users	none 0 points	one of the update or delete operation is only available to the user who added the same food item 3 points	both update, delete operations are only available to the user who added the same food item 6 points	more than what expected, done in a nice creative way 6.5 points		
R10 API	none 0 points	to some extent 2 points	completely done 3 points	API that implements get, post, push and delete check readme file for this to see if implemented 9 points		

R11 form-validation,	none <i>0 points</i>	to some extent, just a few validations, such as checking email address or length of password or username <i>2 points</i>	form validation is implemented in many cases <i>5 points</i>	all form data has some sort of validation <i>10 points</i>	
Access control add, update and delete food pages are available only to logged-in users	none <i>0 points</i>	one of the three access controls are implemented <i>2 points</i>	2 out of three implemented <i>4 points</i>	all three implemented <i>6 points</i>	
(Repo) readme file referring to students' work, can you see requirement list and file name and line number in front of each requirement	none <i>0 points</i>	list of requirement only no file name or line number <i>1 points</i>	list of requirement and file names only <i>2 points</i>	completely done, list of requirements, file name and line number each one is addressed. <i>5 points</i>	
(Repo) Readme file includes data model: ER digram or database details)	none <i>0 points</i>	to some extent, collection names or tables names only <i>1 points</i>	collection/table names and field names only <i>3 points</i>	Complete data model including collection/table names, field name and types in each table/collection and ERD in case of SQL back-end <i>8 points</i>	
(Repo) good commenting	none <i>0 points</i>	very few comments <i>1 points</i>	comments are added but not with much details <i>3 points</i>	Extensive comments in all submitted files. <i>7 points</i>
